

Preschool Support Services:

DECD provides support to children with additional needs through services such as Speech Pathology, Psychology, and Family Support Workers. The centre also has connections with other organisations including Autism SA, Novita, Child and Youth Health Services, the Child Assessment Team at Flinders Medical Centre and Southern Primary Health Services Noarlunga.

Children for whom English is not their first language are able to access support through the DECD Bi-lingual Program.

If you have concerns about any aspect of your child's development speak to one of the staff.
