

Taikurrendi CFC Key Improvement focus in 2023

National Quality Standards (NQS)

Goal- Increase children's understanding and language of mathematical concepts and numeracy learning processes through rich, play-based learning.

If we scaffold and build on all children's existing strengths, knowledge and skills in mathematics and numeracy, then we will increase their ability to communicate understandings and increasingly use the language of mathematical concepts and numeracy in their learning.

Numeracy learning processes

Priorities

To support all children's wellbeing and engagement in learning through embedded approaches across the site. If we improve children's understanding of the brain and co/self-regulation through trauma informed practices we will foster a learning environment for all children to 'be ready to learn'.

We will develop and maintain collaborative partnerships with families and communities to support children's engagement, well-being, education and care.

Taikurrendi comes from the Kaurua language meaning 'to be mixed, together.'
